

Male and Female Anatomy and Pregnancy Study Guide

LaFleur

Study:

Male and Female Anatomy notes (handout)

Ch. 16 (Male and Female Reproduction)

Ch. 17 (The Beginning of the Life Cycle—Prenatal Development)

Pregnancy Packet

Be able to label the parts of the male and female anatomy

Know the different parts and their function

Know both male and female hormones and what each hormone is responsible for
(FSH, LH, estrogen, progesterone, testosterone, ICSH)

Be able to explain the menstrual cycle from beginning to end. (Day 1-28)

Know the fetal development stages by trimesters....how does the fetus develop during the different months of pregnancy?

Know the stages of labor and childbirth

What is the first stage of labor called? Second stage? What is transition?

What is it called when the head emerges? What happens to the umbilical cord after the baby is born?

A sample of questions to review.....

How long is the average menstrual cycle?

How long is menstruation?

How long does the egg live in the female reproductive system?

How long does the sperm live?

Where does fertilization usually take place?

Where does the fertilized egg usually implant?

What three structures produce a fluid to help make up the semen?

What's the difference between fraternal and identical twins?

What's an ectopic pregnancy?

What's the purpose of the placenta and the umbilical cord?

Make sure you study for this quiz!! It's multiple choice, matching, and short answer. It is probably the hardest test you will take in Health class this semester. Make sure you have a #2 pencil and your textbook on the day of the test.
